ABSTRACT of the Disclosure

1 An orthopedic bone bolt and bone plate construct comprising a bone
plate member and a series of fasteners. The bone plate member has at least
one open portions, with the open portions allowing placement of a series of
fasteners therethrough at spaced apart positions along a length of the open
6 portions. The series of fasteners are attachable to the plate member at the
open portions, with at least one of the fasteners including a multi-angle
fastener having a pair of fastener sections configured to be angled relative
to one another. The multi-angle fastener comprising; an upper section
having a central longitudinal axis and an outer surface; a lower section
having a central longitudinal axis and an outer surface with a threaded
11 portion configured to be surgically implantable into a patient's bone tissue
and a joint for connecting the upper and lower sections together. The joint
including corresponding mating surfaces configured to articulate with each
other sufficiently to allow the upper and lower sections to angle relative to
one another.
